

ABS BREEDING

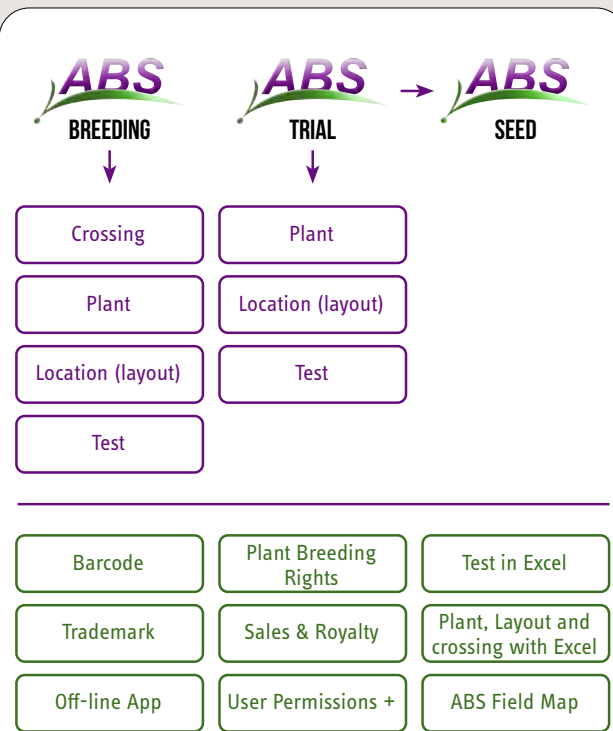

ABS BREEDING is the web-based solution for breeding companies that want to have their data organized, centralized and easily accessible.

ABS Breeding can be delivered in 3 categories:

- Breeding
- Trials
- Field map

Additional modules can be added to expand the solution.

The purple modules are the basic modules for ABS Breeding. The green modules are additional to the basic modules and can be added upon request. ABS Field Map can be bought and used as a stand-alone module. It is a tool to map field data based on Google Maps' coordinates of all your field locations.

Module	Functionality
Crossing	Registration and monitoring all crossing activities (father/mother line, results, etc).
Plant	Registration of all plant material
Location (Layout)	Registration of all plants with a very accurately defined location (to the squared centimeter)
Test	Registration of all trials and results

WHY ABS BREEDING

- Ability to work all together in one system and no risk of individual interpretation
- Consistent data (changes to data update every linked record)
- High level of customization
- Insight to historical data and parent tree
- Excellent flexibility in:
 - o Search
 - o Display
 - o Defining properties
 - o Defining your test
 - o User rights
- Very user-friendly
- Real-time overviews

WHY ABS

- Advice on business optimization and processes
- Service desk 24/7 all time zones
- On-site consultancy and support
- Regular software updates
- Customizations will not be lost when upgrading to a new version
- We know your business!

ABS has been providing organizational advice and standard software solutions specifically for agriculture for more than 20 years.

Our solutions are implemented with breeding companies, seed multiplication companies and fresh produce companies.

Our customers are world-leading companies in their sector and are mostly active in field crops, vegetables and flowers. The software can handle all product types such as seeds, bulbs, plugs and composed products.
