## ABS Seed Apps

ABS Seed offers a complete range of APPS for different processes in your seed company. These APPS can replace your old ABS Mobile applications. The APPS are divided in ON-LINE apps and in OFF-LINE apps dependent of their purpose.

### ON-LINE Apps for Inventory and Processing

The inventory and processing apps are used in your warehouse and processing facility to register various of your in-house activities. All apps control its specific functionality in a workflow and can be used in combination with native functionalities on your device as the camera, the barcode and IR readers. Your devices are used on-line and are linked via WIFI to the network in your warehouse and processing facilities. These apps can be used both on Android as well as iOS devices.

Overview of our ABS Seed ON-LINE apps:

---

	Expedition App:	Pick, pack and ship sales deliveries
	Move inventory App:	Warehouse movements of the seeds, move quality samples and including move colli for a delivery
	Receiving App:	Receive seeds, from either production, purchase, or transfer
	Processing App:	Execute process assignments, like drying, cleaning or packing of the seeds
	Stock-taking App:	Execute the stock-taking of your warehouse locations
	Destroy Seed App:	Destroy the seeds which have no commercial value anymore

---

Sampling App:

Take the samples from inventory

Inventory Management App:

Can be used for a variety of tasks in the warehouse: change packaging, bulk to fust, get information about the batch, unpack the seeds, move a whole location

Sales App:

Streamline customer visits with the ABS Sales App, offering sales reps real-time order creation and stock visibility. Instantly create and confirm orders on-site, with seamless direct booking into ABS, removing the need for back-office input.

## OFF-LINE Apps for Production and Quality

The production app is used in the field and the quality app is used in your internal laboratory or when available used by your external laboratory. Both apps also control its specific functionality in a workflow and can be used in combination with native functionalities on your device as the camera, GPS, the barcode reader. Your devices are used also off-line. These apps can only be used on Android devices.

Overview of our ABS Seed OFF-LINE apps:

Production App:

On-line and off-line registration of worldwide field inspections and activities. It offers expectations on yields, diseases and weeds on your production. The application is able to record GPS locations, photos and to make drawings

Quality App:

Registration of the quality test results, photos and barcode reading with camera, both on-line as well as off-line

## WHY ABS

- Advice on business optimization and processes
- Service desk 24/7 all time zones
- On-site consultancy and support
- Regular software updates
- Customizations will not be lost when upgrading to a new version
- We know your business!

ABS has been providing organizational advice and standard software solutions specifically for agriculture for more than 20 years.

Our solutions are implemented with breeding companies, seed companies and fresh produce companies.

Our customers are world-leading companies in their sector and are mostly active in field crops, vegetables and flowers. The software can handle all product types such as seeds, bulbs, plugs and composed products.
