

ABS Trial

WWW.AGROSOLUTIONS.NL

ABS Trial, is a comprehensive, web-based platform designed to streamline the organization of crop trials and the capturing of critical field observations. Built for global operations, the system provides secure access to a centralized database from any location.

ABS Trial modules

Plant	Registration of all plant material
Location	Registration of all plants with a very accurately defined location (to the squared centimetre)
Variety	List of trial varieties
Test	Registration of all trials and results

Additional modules

Offline app	Advanced data import & export
Barcoding	API connect

ABS Trial offline app

For research conducted in remote areas, our dedicated offline app ensures seamless data scoring and capture even without an internet connection. Use barcodes to quickly access plant information, conduct tests with ease and then sync your data when you're back online.

Why ABS Trial

- Web based and user-friendly
- Very flexible to configure and make a fit with your business process
- Ability to work all together in one system and no risk of individual interpretation
- Consistent data, structure and real-time overviews
- Insight into historical data
- Easy implementation in short implementation time
- Service desk to support you with all your questions

Why ABS

- Advice on business optimization and processes
- Servicedesk 24/7 all time zones
- On-site consultancy and support
- Regular software updates
- Customizations will not be lost when upgrading to a new version
- We know your business!

ABS has been providing organizational advice and standard software solutions specifically for agriculture for more than 25 years.

Our solutions are implemented with breeding companies, seed companies and fresh produce companies.

Our customers are world-leading companies in their sector and are mostly active in field crops, vegetables and flowers. The software can handle all product types such as seeds, bulbs, plugs and composed products.
